The Estrogen Effect: How Chemical Pollution Is Threatening Our Survival. By Deborah Cadbury. 292 pp. New York, St. Martin's Press, 2000. \$13.95. ISBN 0-312-26707-X.

Facts and Ideas from Anywhere. By William Clifford Roberts. 172 pp. Armonk, N.Y., Futura, 2000. \$39. ISBN 0-87993-463-8.

Genetic Engineering: A Primer. By Walter E. Hill. 264 pp., illustrated. Amsterdam, Harwood Academic, 2000. \$27.50. ISBN 90-5702-632-5.

A Handful of Ashes: One Mother's Tragedy. By Victoria C.G. Greenleaf. 393 pp. Fort Bragg, Calif., Cypress House, 2001. \$29.95. ISBN 1-879384-37-X.

CORRECTION

A Magic Bullet for Cancer — How Near and How Far? (July 26, 2001; 345:283-4). On page 283, the sentence that begins 22 lines from the bottom of the left-hand column should have read, "The resulting humanized chimeric monoclonal antibodies contain human Fc-region sequences, and their antigen-binding region consists of frameworks derived from *human* sequences and *mouse* hypervariable sequences," not "derived from *mouse* sequences and *human* hypervariable sequences," as printed. There were also errors in Figure 1, which is reprinted with its legend below.

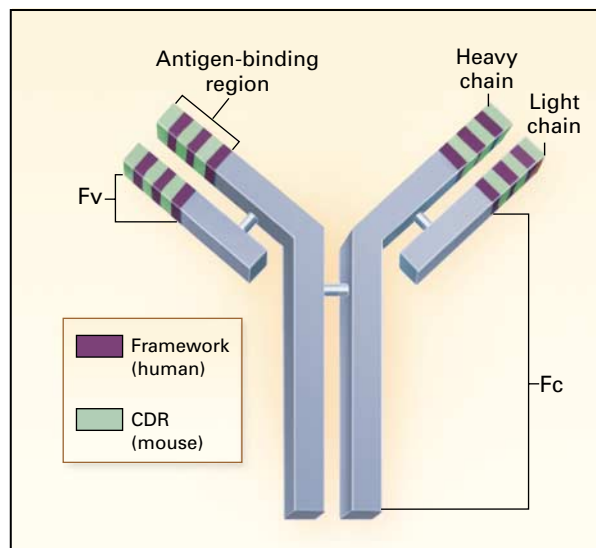

Figure 1. Humanized Chimeric IgG.

The heavy and light chains possess variable (Fv) and constant (Fc) regions. Cleavage of IgG by papain produces two Fv fragments and one Fc fragment. The actual antigen-binding site is formed by mouse hypervariable loops, designated complementarity-determining regions (CDR), that lie within human framework regions.
