

Chemoprevention is important in a field in which multiple primary tumors may occur in the same patient, but advances appear disappointing, and a change in lifestyle is still the greatest contributor to the long-term survival of the patient with head and neck cancer who is cured of the presenting tumor. The chapter on gene therapy is satisfactorily comprehensive, but because the field is complex, the chapter would have benefited from the addition of a simple summary of the important points.

Certainly, this book will be a valuable tool for surgeons and oncologists who deal with head and neck cancer. It would also be a useful addition to any institution's library.

CORRECTIONS

Avian Influenza (H5N1) Infection in Humans (September 29, 2005;353:1374-85). On page 1382, lines 3 and 4 of the first footnote in Table 5 should have read "at least 95 percent efficiency in filtering particles with a mean diameter of more than 0.3 μm ," rather than "particles with a mean diameter of more than 3 μm ," as printed.

Protective Conditioning for Acute Graft-versus-Host Disease (September 29, 2005;353:1321-31). On page 1324, in the right-hand column, lines 1 and 2 should have read, "fludarabine, at a dose of 30 mg per square meter of body-surface area," rather than "30 mg per kilogram," as printed. Also, on page 1326, in the right-hand column, under Survival and Tumor Response, lines 6 through 9 should have read, "the period of follow-up for the first patient enrolled and the last patient enrolled was 1041 and 215 days, respectively," rather than "215 and 1041 days, respectively," as printed.

Molecular Determinants of the Response of Glioblastomas to EGFR Kinase Inhibitors (November 10, 2005;353:2012-24). On page 2017, the last footnote in Table 3 should have stated that the test had a positive predictive value of 83 percent, rather than 89 percent, as printed.

Chronic Daily Headache (January 12, 2006;354:158-65). On page 160, in Table 2, the male:female ratio for cluster headache should have read "3:1," rather than "1:3," as printed. Also, on page 217, in the Continuing Medical Education section, choice A under Question 1 (which was listed as an incorrect choice) should have read, "Cluster headaches are more common among women than among men," rather than "more common among men than among women," as printed. Likewise, the explanation that followed the choices, which appeared at www.nejm.org, should have read, "Cluster headache is more common among men," rather than "among women," as printed. This article and its Continuing Medical Education examination have been corrected on the *Journal's* Web site. We regret the errors.

NOTICES

Notices submitted for publication should contain a mailing address and telephone number of a contact person or department. We regret that we are unable to publish all notices received. Notices also appear on the *Journal's* Web site (www.nejm.org/meetings). The listings can be viewed in their entirety or searched by location, month, or key word.

THE CYRIL H. WECHT INSTITUTE OF FORENSIC SCIENCE AND LAW

The Cyril H. Wecht Institute of Forensic Science and Law at Duquesne University School of Law is sponsoring, "Justice for All: A National Symposium on the Role of Forensic Science in the Evolution of Criminal Justice Reform in America," in Pittsburgh, April 20–22.
