**A** HEALTHY 28-YEAR-OLD WOMAN PRESENTED WITH A 1-YEAR HISTORY OF HIGH BLOOD PRESSURE, WHICH had been diagnosed during her first pregnancy and treated with amiloride and hydrochlorothiazide. Physical examination revealed a blood pressure of 200/100 mm Hg. She reported having no chest pain, shortness of breath, or headache. Radiography of the chest was performed. What is the diagnosis?

*Editor's note:* We invite our readers to submit their answers at [www.nejm.org/mystery](http://www.nejm.org/mystery). We will publish the diagnosis in the Correspondence section of the August 16, 2007, issue and e-mail it to everyone who submits an answer. All answers must be received by July 4, 2007.
