

become available. And there are some minor changes that should be made now to make the current version clearer. For example, a pie chart in the introduction shows the leading causes of death without adjustment for age; translating these causes of death into lost quality-adjusted life-years (QALY) would make the case for prevention even more powerful. The authors also recommend a few interventions, such as breast self-examination for women 20 years of age and older, that appear to reflect personal opinions rather than evidence-based decisions. But these and other minor issues do not detract from what is an otherwise excellent contribution to the goal of improved preventive health care.

The authors conclude with a persuasive argument for eschewing alternative and complementary medicines whose efficacy has not been demonstrated in clinical trials, and they make strong policy recommendations to bring herbal remedies and dietary supplements under the scrutiny of the Food and Drug Administration and to define these remedies as drugs, not as nutritional supplements, as they are now defined in the Dietary Supplement Health and Education Act. Perhaps by educating the patients who will use this new resource, the authors will succeed in generating the social will to counter the powerful lobbying of the alternative and complementary medicine industry.

## CORRECTIONS

Tumor Necrosis Factor  $\alpha$  and Colitis-Associated Colon Cancer (June 19, 2008;358:2733-4). In the first sentence of the fourth paragraph (page 2733), etanercept should have been described as “a human TNF- $\alpha$  antagonist (a fusion protein of the ligand-binding portion of the human p75 TNF receptor with the Fc portion of human IgG1)” rather than as “a monoclonal antibody that binds TNF- $\alpha$ .” The article has been corrected on the *Journal's* Web site at [www.nejm.org](http://www.nejm.org).

Accuracy of CT Colonography for Detection of Large Adenomas and Cancers (September 18, 2008;359:1207-17). In Table 4 (page 1215), row 2, the table entry should read, “No. of lesions.” We regret the error. The table has been corrected on the *Journal's* Web site at [www.nejm.org](http://www.nejm.org).
