

portantly, each chapter focuses on and solidifies specific concepts and controversies. Thus, the book is a valuable resource when a question arises in practice or when additional foundation is needed in a specific area. Readers will gain a better understanding of complex issues, which will hold them in good stead in discussions with peers, with research subjects, and with people thinking of becoming participants in clinical research.

The book begins with a comprehensive examination of the historical precedents and events that bring us to the present state of research ethics and that shape its probable course in the future. This material is followed by 10 sections covering ethical aspects of areas such as codes and guidance, scientific design issues, review and oversight, selection of subjects, and informed consent. The last two of these sections, which are of particular interest and importance, cover multinational research and investigator behavior, including discussions of conflicts of interest and scientific misconduct.

This book supports physicians who seek to perform real-world research in the most ethical way. To paraphrase Henry Beecher in his seminal article in the *Journal*, "Ethics and Clinical Research" (*N Engl J Med* 1966;274:1354-60), the ethical conduct of research principally depends on the researcher acting in a responsible manner. This book gives researchers a good grounding in what those responsibilities are and why they are important.

The attention paid to international perspectives increases the book's appeal. The editors state in their introduction that they intentionally included authors from as many different countries as they could. It is refreshing to see that this enlightened attitude extended even to the selection of the photograph on the cover, which shows not a laboratory with test tubes or a patient sitting on an examination table but instead a researcher interacting with a subject under a tree in a remote village.

The book's format is pleasing as well. There is good use of headings and subheadings to assist the reader who is looking for a specific topic. There are also photographs, tables, and other graphics that maintain interest and help the reader consider ethical issues. Each chapter includes a list of references that supports the text and provides readers interested in further exploration with solid points of departure. Although social scien-

tists and behavioralists may feel somewhat slighted, the book is perfect for an upper-level course on clinical research ethics.

This book is a gem. The editors have admirably met their goal of producing a book that is comprehensive, that provides a systematic analysis, and that does so from a multicultural approach.

CORRECTIONS

Bivalirudin versus Unfractionated Heparin during Percutaneous Coronary Intervention (August 14, 2008;359:688-96). In Methods, in the second paragraph under Study Protocol (page 689), the third sentence should read, "Sheaths were removed and manual compression was applied as soon as the activated partial-thromboplastin time fell below 50 seconds." The article has been corrected on the *Journal's* Web site at www.nejm.org.

Photo filler (July 3, 2008;359:42). The title of the photograph printed on page 42 should have been Hyacinth Macaw rather than Blue Toucan. We regret the error.

Keratoderma Blennorrhagica (May 15, 2008;358:2160). An additional correction is described in the Correspondence section of this issue of the *Journal* (Keratoderma Blennorrhagicum-like Rash [August 28, 2008;359:974]).

NOTICES

Notices submitted for publication should contain a mailing address and telephone number of a contact person or department. We regret that we are unable to publish all notices received. Notices also appear on the Journal's Web site (www.nejm.org/meetings). The listings can be viewed in their entirety or searched by location, month, or key word.

EMERGENCY MEDICINE (ZUSATZBEZEICHNUNG NOTFALLMEDIZIN)

The course will be offered in Essen, Germany, Sept. 20–27. It is presented by the Department of Anesthesia, University Duisburg-Essen.

Contact Dr. Frank Herbstreit, Department of Anesthesiology and Intensive Care Medicine, Universitaetsklinikum Essen, Hufelandstrasse 55, 45122 Essen, Germany; or e-mail frank.herbstreit@uk-essen.de.

50TH ANNUAL KAISER PERMANENTE PEDIATRIC SYMPOSIUM

The symposium will be held in Palm Springs, CA, Oct. 31–Nov. 2.

Contact Kaiser Permanente/Physician Education, 100 S. Los Robles Ave., Suite 101, Pasadena, CA 91101; or call (626) 564-5338; or fax (626) 564-7774; or e-mail joyce.l.boyd@kp.org; or see <http://www.kpsymposia.com>.
